

- 1) If there was no synchronization tools you could end up with a race conditions, because of the shared resource of the passenger platform queue, threads could be reading/writing to the same slot. We need to provide the critical section with mutual exclusion while also avoiding deadlock. An example would be two taxis picking up the same passenger.
- 2) [2,5,10], [100,10,2]

Taxi driver 0 waits for passengers to enter the platform

- 3) A bug is when there are not enough passengers arriving for the amount of taxis. If the queue is empty, taxi keeps picking people up. The full semaphore for some unknown reason is still allowing access to the queue even when it is empty. This causes the taxis to be stuck in a continuous loop. To solve this incompletely, I added a break statement when the queue is empty as to avoid the infinite loop.
